Linda,

I spoke with David and he would allow us to use a RTV product to bond the Plugs into the Skidtube.

The existing Plugs would require:

- 1) Removal from the Skidtube
- 2) Removal of the current O-Ring
- 3) Cleaning with Alcohol
- 4) Installation of NEW O-Ring
- 5) Generous coating of the RTV
- 6) Insertion of plug into the Spacer
- 7) Clean up of exterior of Skidtube.

Pat

I heard yesterday that plugs were falling out. Today we were told that we cannot ship any 350 skids. We have an order to ship today, has there been a solution found to fix this problem? Can we not just sikaflex them in or something? We need to let the customer know if his order is shipping or not...

Thx

Linda

Chris,

Sorry for the delay in getting back to you on this.

If these are the only plugs that we are having a problem with, then I am OK with leaving them out of the skidtubes since the holes that are being plugged are so small. Seems weird to me that we've suddenly started to have a problem, but whatever.

Can I assume from your email that the rest of the plugs are OK?

Regards,
David

David,

When installing D3492-045 plugs into the 3/16" holes for D4168-043 Skidtubes (AS 350), the o-rings are ripping. See the attached photos for one of the plugs. The effected hole is section AU-AU from the attached pdf page. This is causing some of the plugs to fall out when handling them.

I tried a new plug (D3492-5) and new o-ring (NAS1611-005) with an unpainted D3890-5 spacer (0.197 ID) and could not get it installed without the same ripping. We enlarged a spacer to 0.206" ID and put a 0.220"x45deg c'sink (about the OD of the o-ring) hoping it would force the o-ring into the hole. It ripped less, but the o-ring just doesn't want to compress that much. Some of the o-ring always wants to squeeze out and it gets sheared off when you try to force the plug in (it takes a lot of force to get it in).

I don't know how we've been doing this in the past. We only noticed the problem this time during final packaging of the latest batch.
